Hydrometeorology	page 75
Water quality	page 91

Introduction

Training provides an excellent opportunity to gain knowledge and develop new professional skills. In the Staff Appraisal Report of the Hydrology Project, a variety of training approaches are suggested, each with dedicated financial resources. These include: short job-related training courses at central training institutes, in-house training, workshops and seminars, study tours and postgraduate courses in India and overseas.

This catalogue was prepared to help you arrange your study tours in India and select appropriate sites and organizations in the central and state water resources departments active in the areas of surface water, groundwater, water quality and hydrometeorology. These sites and organizations may be directly contacted by you to confirm your interest and arrange the study tour logistics.

The catalogue is based on information and references kindly provided by the hosting agencies, nodal officers and the project's State Management Consultants. While extreme care has been taken to correctly compile the information, some inaccuracies may have crept in inadvertently. It is therefore advised, to always confirm convenience and travel logistics with the contact person of the selected site(s).

We welcome your comments on factual mistakes, your impressions on visits made and possible new sites interesting enough to include in subsequent issues of this catalogue. It would be particularly interesting to include more offices where new, advanced functions in the Hydrology Information System (HIS) are started and can be demonstrated and discussed with others who have as yet to start. These new functions include: special equipment, data entry, validation, modeling etc.

For the purpose of sending corrections and new information, an empty form is included at the last page. Based on your responses and our own fact-finding, this study tour catalogue will be updated every six months and circulated through HP training coordinators.

We trust that this catalogue will help you to undertake more study tours in India, as part of the effort to create a knowledgeable, skilled and motivated cadre of hydrology staff.

Surface water

Andhra Pradesh

<i>Name of site</i>	Perur on Godavari River
<i>Location</i>	Perur (via) Venkatapuram Nagur (Taluqa), Distt. Khammam
<i>Hydrology domain</i>	Surface water

Features

River gauging, discharge measurement, sediment sampling and water quality

Contact

Name:	Executive Engineer		
Organisation:	Lower Godavari Division, Central Water Commission
